

Webinar: Learning from the Landscape: Strategies in Early Childhood Health Equity

NICHQ Webinar

Learning from the Landscape: Strategies in Early Childhood Health Equity

April 29, 2021 from 3:00 PM - 4:00 PM (EDT)

During the last decade, there has been an increasing understanding of how the social determinants of health (e.g., systemic and environmental challenges such as poverty, poor housing, and poor health care) affect the health and well-being of young children and their families. The multi-faceted nature of these challenges led many communities and states to build – or expand – initiatives from multiple sectors, disciplines, and systems to join to address disparities in early experiences and outcomes for young children.

The [Early Childhood Health Equity \(ECHE\) Landscape Initiative](#) set out to understand and highlight promising strategies to address key issues such as sustainability, data use, state and local relationships, cross-sector partnerships, and operationalizing health equity within the context of early childhood health equity initiatives.

As interest in health disparities (and community-wide solutions to address them) grows, public health professionals can better understand what challenges these initiatives face and what strategies communities are using to address them.

Webinar Objectives:

- Describe key strategies that early childhood health equity initiatives have found to be impactful
- Identify other early childhood health equity initiatives for potential networking

Audience: Public health professionals and advocates who focus on early childhood and/or health equity

Speakers will include:

- Researchers from the teams at NICHQ and Child Trends who conducted the project
- Representatives from early childhood health equity initiatives who will share their perspectives on success, challenges, and needs for the future
