# Protect Yourself, Your Family, and Your Baby:

Get the COVID-19 Vaccine!

The COVID-19 vaccine is safe before, during, and after pregnancy. If you're thinking about getting pregnant, trying to get pregnant, are pregnant or breastfeeding, get vaccinated now!

Why Get Vaccinated?

If you're pregnant

- Your risk is higher for serious illness, pregnancy complications, and death from COVID-19 than people who are not pregnant.

- COVID-19 vaccines do not cause infection in pregnant people or their babies.

- You are not at higher risk of pregnancy loss (miscarriage) or other problems with pregnancy.

If you're trying to get pregnant

- COVID-19 vaccines do not affect your ability to get pregnant, even if you're going through fertility treatments.

- Studies have not linked COVID-19 vaccines with problems related to pregnancy, monthly periods, erectile performance, sperm quality, or infertility.
